Volume 26 contents

VOLUME 26 NUMBER 1, JANUARY 1998

Four-port representations of heat exchangers
C. Lombard

Use of finite difference method in the study of stepped beams
A. Krishnan, Geetha George and P. Malathi

The pneumatics module as part of an in-house practical training programme
Patrick S. K. Chua

One-dimensional composite micromechanics
Martin L. Dunn

Employing the concurrent design philosophy in developing an engineering design science programme
P. M. Wild and C. Bradley

Non-linear gasoline tanks and gauges
Jude T. Sommerfeld

The necessary conditions for plane motion of a rigid body
D. S. Djukic and S. E. Jones

VOLUME 26 NUMBER 2, APRIL 1998

Teaching vibration analysis using symbolic computation software
Hemanshu R. Pota and Thomas E. Alberts

An introduction to the impact behaviour of polymer composites using simplified beam models
R. A. W. Mines

The use of a hypermedia system to develop confidence in engineering design
J. D. Bailey and M. Hill

Introducing CFD to undergraduate chemical engineers
Derek Wilkinson

A computer experiment on man–machine interaction
N. Aydin Hizal

Teaching flow and thermal characteristics of laminar forced convection in tubes with variable internal straight fins
Antonio Campo and Jane Chang

The development of a dynamic balancing machine
Liberto Ercoli and Salvador La Malfa

A proposal for the Poisson process of classical thermodynamics
J. Richard Shanebrook

Two propositions in the problem of the torsion of bars
Shuguang Li

On a consistent use of sign convention for heat flows
Jeffery Lewins

VOLUME 26 NUMBER 3, JULY 1998

CFM self-teaching in the fluids laboratory: Newtonian and non-Newtonian flow in circular pipes
W. A. Bullough, G. E. Cardew, J. Kinsella and F. E. Boyson

Further comparative studies in the prior knowledge assessment of B.Eng. (Hons) course entrants
J. Adamson, T. Byrom and H. Clifford

Thermodynamic analysis of thermoelectric coolers
Mamdouh El Haj Assad

An engineering vibrations course with projects
Hakan B. Gürocak

Integrated data acquisition and control system of an engine testbed
Julio Barros Guadalupe, Victor M. Morenzo Sáiz and José Isla Romero

Product investigation for first-year Mechanical Engineering students
J. N. Fawcett and J. F. L. Chan

On the application of strain gauges for a structural member subjected to complex type of loading
Satish C. Sharma

The kern of a stretched section is the stretched kern of the section
K. Schulgasser

A use for Jacobians in thermodynamics to express the ratio c_p to c_v
Jeffery D. Lewins

Making the radian less special
David G. Clayton

VOLUME 26 NUMBER 4, OCTOBER 1998

A design-and-build project to introduce concepts relating to dimensional variation
S. M. Panton and P. R. Milner

Time and space management in structural analysis problems
John M. Kihiu and Stephen M. Mutuli

Low cost sun-tracking photovoltaic p
Luciano E. Chiang and Jorge E. Jacob

Holographic stereograms and their potential in engineering education in a disadvantaged environment
B. I. Reed and J. Gryzagoridis

Coping with curvilinear coordinates
J. Paavola and E.-M. Salonen

A laboratory project-based teaching approach to integrated design
J. Lin and A. A. Ball

Implementation of a digital controller based on a reduced order observer for an inherently unstable multivariable system
R. Roddis and D. Wardman

Position of shelf supports
J. P. Ward
